

About Dataset

Breast Cancer Prediction Dataset (Synthetic)

Overview

This dataset contains **10,000 synthetic patient records** designed for machine learning, data science, and educational purposes.

It includes demographic information, lifestyle factors, medical history, diagnostic findings, and a binary target variable indicating breast cancer diagnosis.

The dataset is intended for:

- Binary Classification
 - Machine Learning
 - Data Preprocessing
 - Feature Engineering
 - Exploratory Data Analysis (EDA)
 - Educational Projects
-

Dataset Information

- Records: **10,000**
 - Features: **23**
 - Target Variable: **Cancer**
 - File Format: CSV
-

Files

breast_cancer_prediction.csv

Main dataset containing all patient records and features.

data_dictionary.csv

Provides descriptions, data types, and examples for every feature.

Target Variable

Value	Meaning
0	No Cancer
1	Cancer

Applications

- Breast Cancer Prediction
- Classification
- Data Visualization
- Feature Engineering
- Model Evaluation
- Educational Projects

Disclaimer

This dataset is **synthetically generated** and intended solely for educational, research, and machine learning practice.

It does **not contain real patient information** and must **not be used for clinical diagnosis or medical decision-making**.
